This typical American four-square house has a porch spanning the front of the house, approached by a small staircase. The porch has a few distinguishing decorative features: the posts and spindles are of turned wood, and a hood hangs over the porch that is also made of spindles and clover designs. On the porch is a central front door with a transom light. On the back of the house is a series of four additions, each shorter than the one before it. The last one, which is barely tall enough for a person to stand in, has a flat roof.

There is a small porch on the east side of the house, with an entrance into a separate apartment. The first three have gable roofs, but the last one has a flat roof. On either side of the porch is a series of paired columns with spindles and clover designs. On the porch is a central front door with a transom light. On the back of the house is a series of four additions, each shorter than the one before it.

42. Further Description of Important Interior and Exterior Features (Continued from page 1)

The occupant who lived there longest was Harold E. Shephard, and his wife, Bernice, the principal of Prospect Elementary. They lived there for at least 35 years beginning in 1927. 1933 Sanborn maps describe the house as a dormitory called Shepard House, presumably for the student boarders they kept. Now, Oberlin College rents the property to professors.
